

Patient **Kadence Wilson** (L)
with her mother **Kory Wilson** (R)

“ At BC Children’s Hospital, every time my daughter needed medication, they would scan the band on her arm to ensure she was the right patient getting the right medicine. The scanning process and system as a whole allows for more security and increased safety precautions, which will result in less human error and make things more efficient overall. It’s fantastic. It’s about time. ”

– Kory Wilson

Through the Clinical & Systems Transformation (CST) project, we will transform health care systems and processes to improve the safety, quality and consistency of patient care. Learn more at:
